Motives

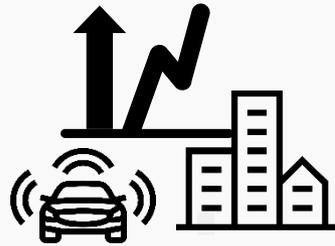

Different Reasons for Vehicle Automation

Improved Road Safety

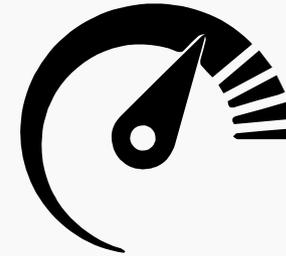

Growing mobility needs & urbanization

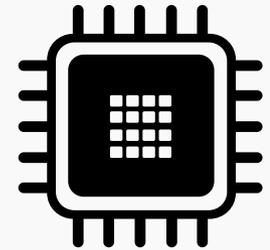

Shared Mobility = Lower Traffic Density

Use Time more effectively

Maturity of Technology

Customer centered mobility = Comfort

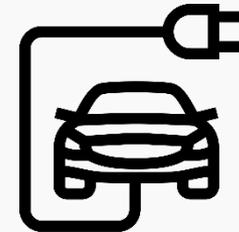

Seamless customer journeys

Max. connectivity of vehicle / services

Towards Zero Emissions

More affordable Transportation

Mercedes-Benz has the Longest History in ADAS

1978 **ABS**

1980 Airbag, Belt Tensioner

1989 Automatic Rollover Bar

1995 **ESP®**, Sidebag

1996 Brake Assist System

1997 Sandwich Concept

1998 **Distronic** Windowbag, Adaptive Airbags

2000 Integral Safety Approach

2002 **PRE-SAFE®**

2003 Active Light Functions

2005 Adaptive Brake Lights, Brake Assist System BAS PLUS,
NECK-PRO Head Restraint

2006 **PRE-SAFE® Brake**, Intelligent Light System

2007 **Blind Spot Assist**

2008 Active Park Assist

2009 Attention Assist, Adaptive Highbeam Assist, Lane Keeping Assist, Speed Limit Assist, Self-Adaptive Rear Belt Force Limiters

2010 Active Blind Spot Assist, Active Lane Keeping Assist

2011 **COLLISION PREVENTION ASSIST**, PRE-SAFE® Brake with City Braking Function, Night View Assist with
Spotlight-Function

2012 360° Camera, Side Wind Assist by ESP®

2013 **Intelligent Drive**: DISTRONIC PLUS with Steering Assist and Stop&GoPilot, PRE-SAFE® Brake with
Pedestrian Detection, BAS PLUS with Cross Traffic Assist, PRE-SAFE® PLUS, PRE-SAFE® Impulse, Beltbag, MAGIC
BODY CONTROL, Adaptive Highbeam Assist Plus

2014 COLLISION PREVENTION ASSIST PLUS

2016/17/18 **Intelligent Drive Next Level: Map enhanced** Active Distance Assist DISTRONIC and Active Steering
Assist, **Active Lane Change Assist**, Active Speed Limit Assist, **Active Emergency Stop**

Assist, Active Brake Assist with Cross Traffic Function, **Evasive Steering Assist**, PRE-SAFE®

Sound, **PRE-SAFE® Impulse Side**

AD - System scalability

Daimler
Trucks

Mercedes-Benz
Cars

Daimler
Buses

Mercedes-Benz
Vans

Joint technology platform for all L4/L5 use cases:

- Synergies in SW, HW, processes, infrastructure
- Independent requirements gathering to ensure full suitability for each granular market
- Specific scope beyond platform optimized based on required market timing

We are able to scale our AD System across **use-cases** and **regions**

The Disruption Case Forms of On-Demand Mobility

Car Sharing

You are the driver

- + Flexible, no driver, affordable
- Limited coverage area, parking issues

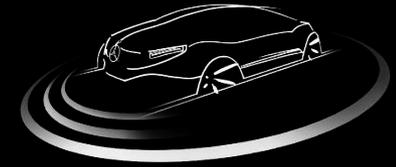

Taxis / "Ubers"

Chauffeured

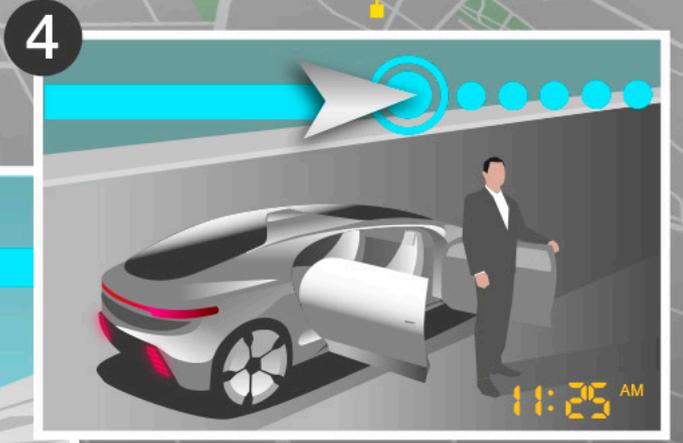

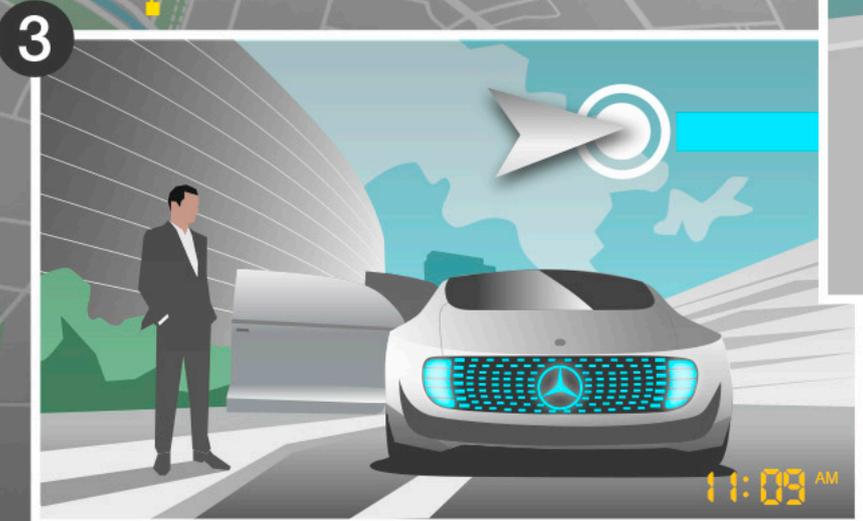

- + Versatile, convenient, anywhere
- Costly, needs driver

The Disruption Case Automated On-Demand Mobility

Car Share You are the driver	Robocabs Self-driving	"Ubers" Unstaffed
		
<p>+ Flexible, no driver - Limited coverage area</p>	<p>Eventually the best of both worlds?</p>	<p>Convenient, anywhere needs driver</p>

Truck logistics

There are a lot of Inefficiencies in Road Transportation Today

**REST AREAS
FULLY BOOKED**

TRAFFIC JAMS

**INEFFICIENCY IN
CARGO TERMINALS**

**WAITING AT
BORDER &
CUSTOMS**

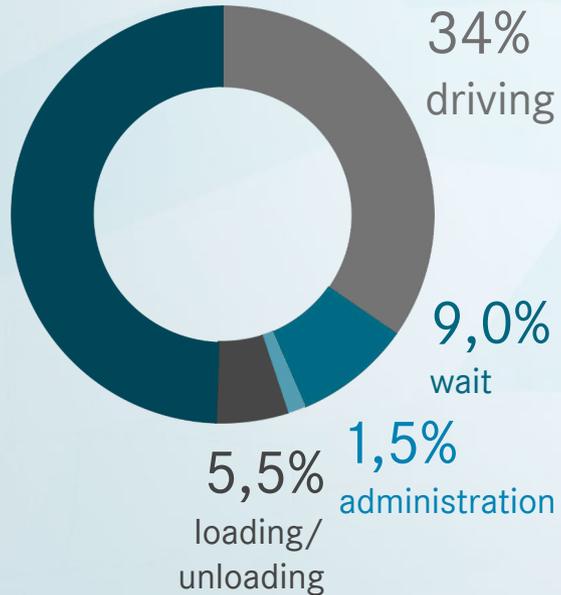

Logistics KPIs

Potentials for Automated Driving Example US Market

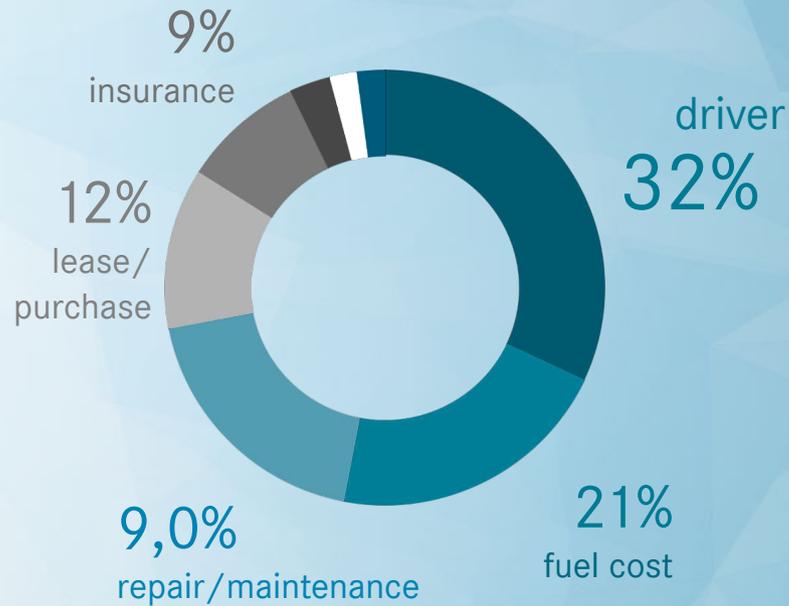

Time

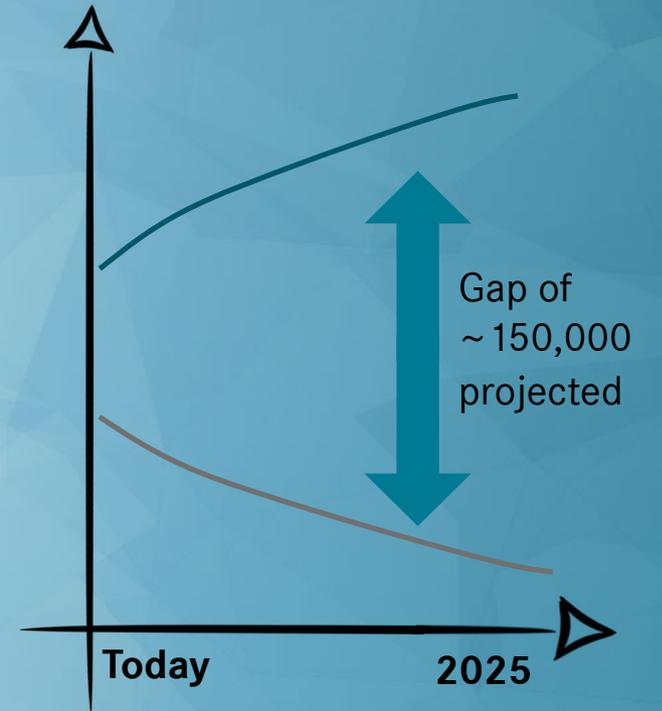

stand/park
~50%

Cost

Driver Shortage

Autonomous Driving for Transportation and Logistics

Safety

- Less accidents/fatalities
- Less work related injuries

Comfort

- Raised attractiveness of the job
- Less stress and work-related illness

Time

- Productive additional tasks
- Lower transport times

Profitability

- Higher Asset usage
- Optimized driving hours

Way Towards Autonomus Trucks

Safe Technology

Vehicle Automation Components

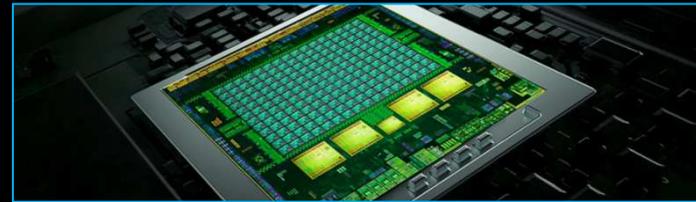

Sensors

What an autonomous vehicle does not "see", it is likely to drive into

Autonomous Vehicle "Brain"

Deciding which course of action is right depending on the situation

Backend

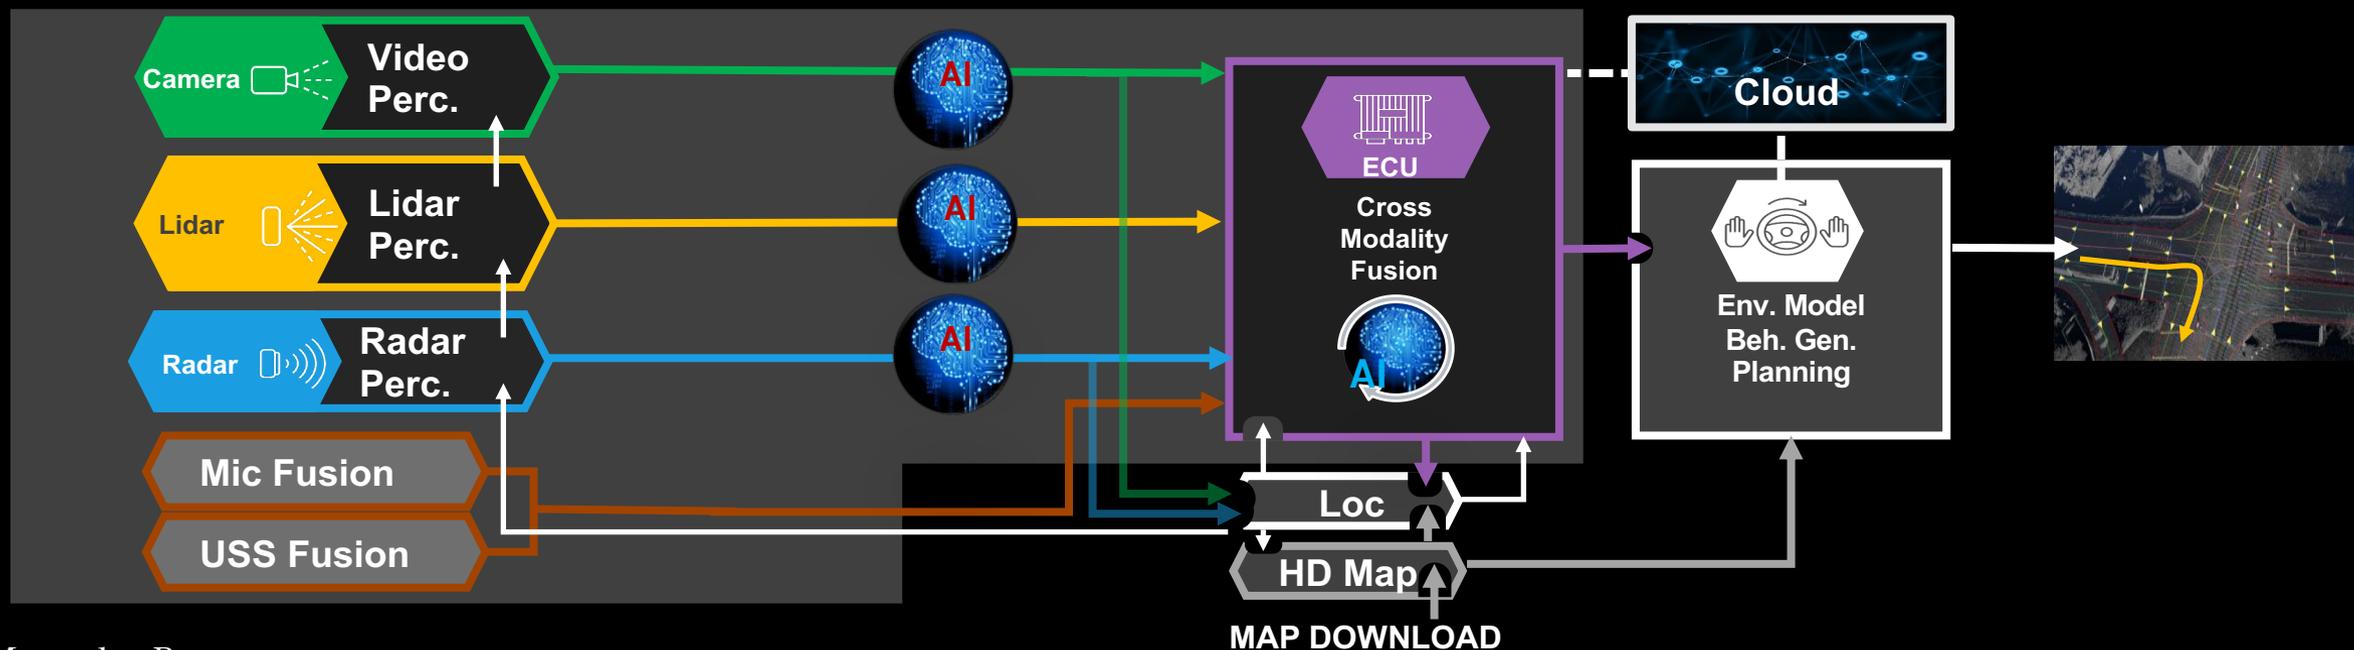

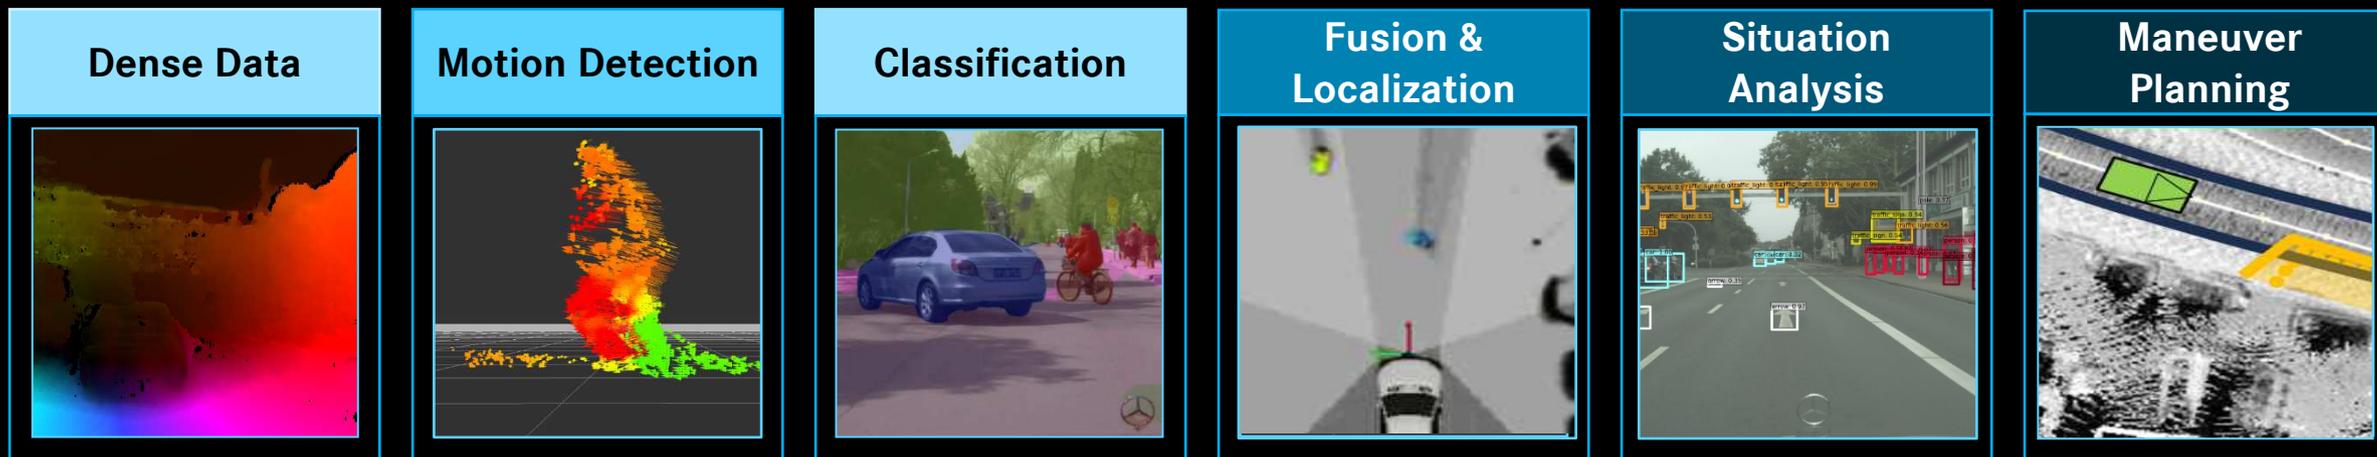

Data provisioning and collection as well as operator commands

Redundant Actuators

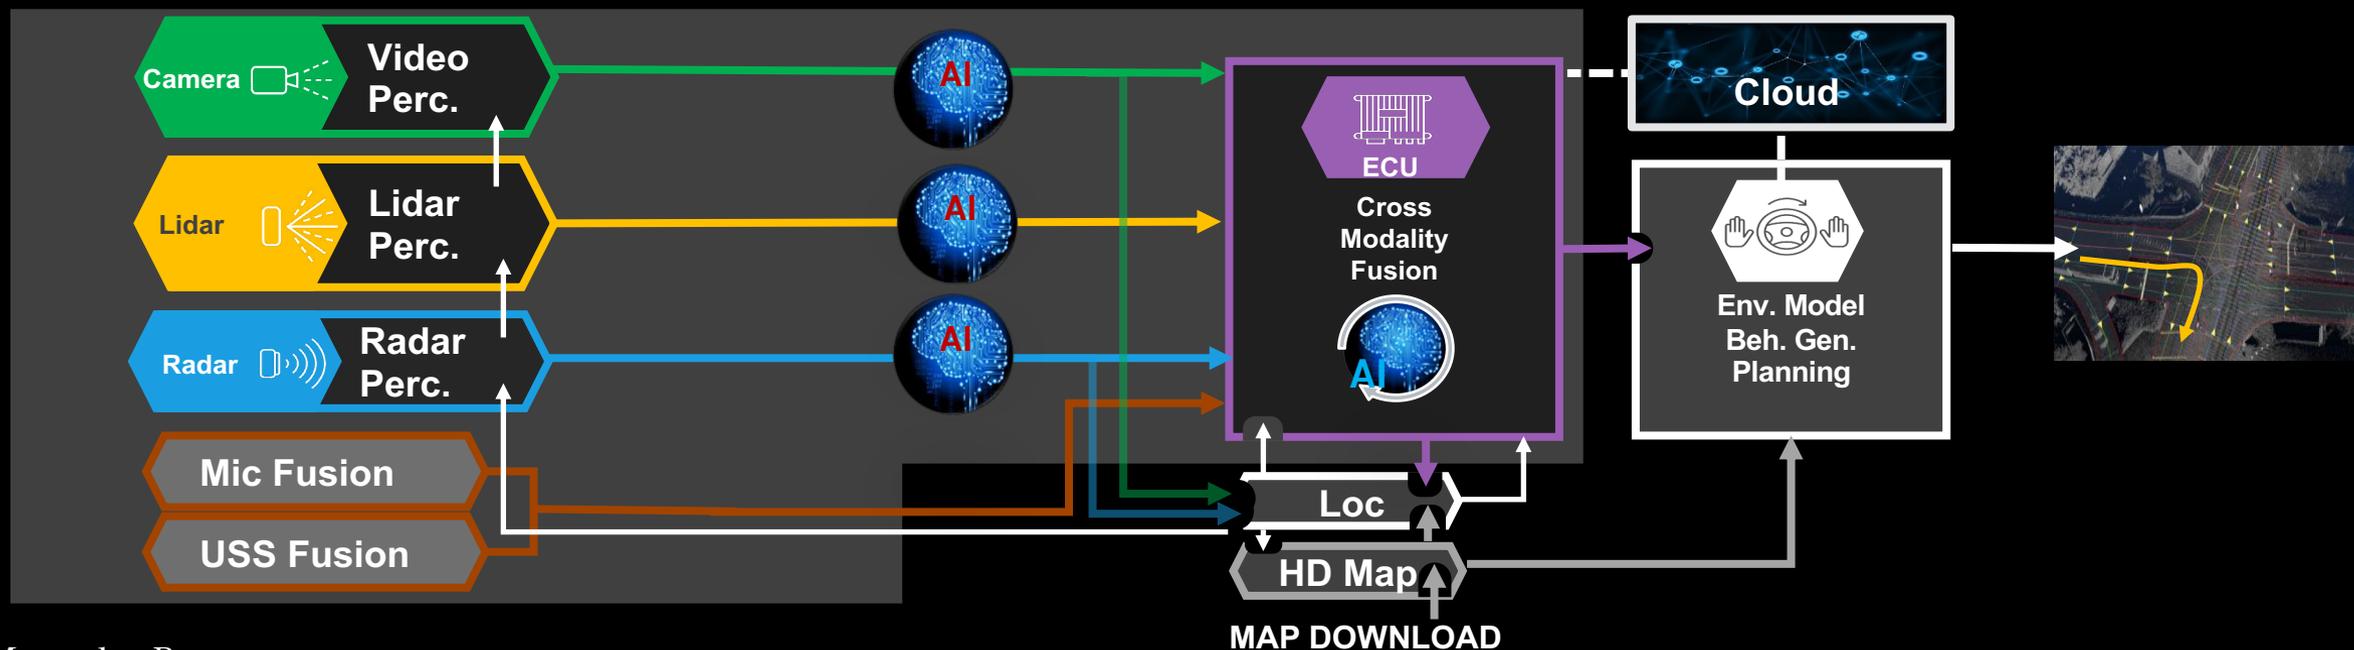

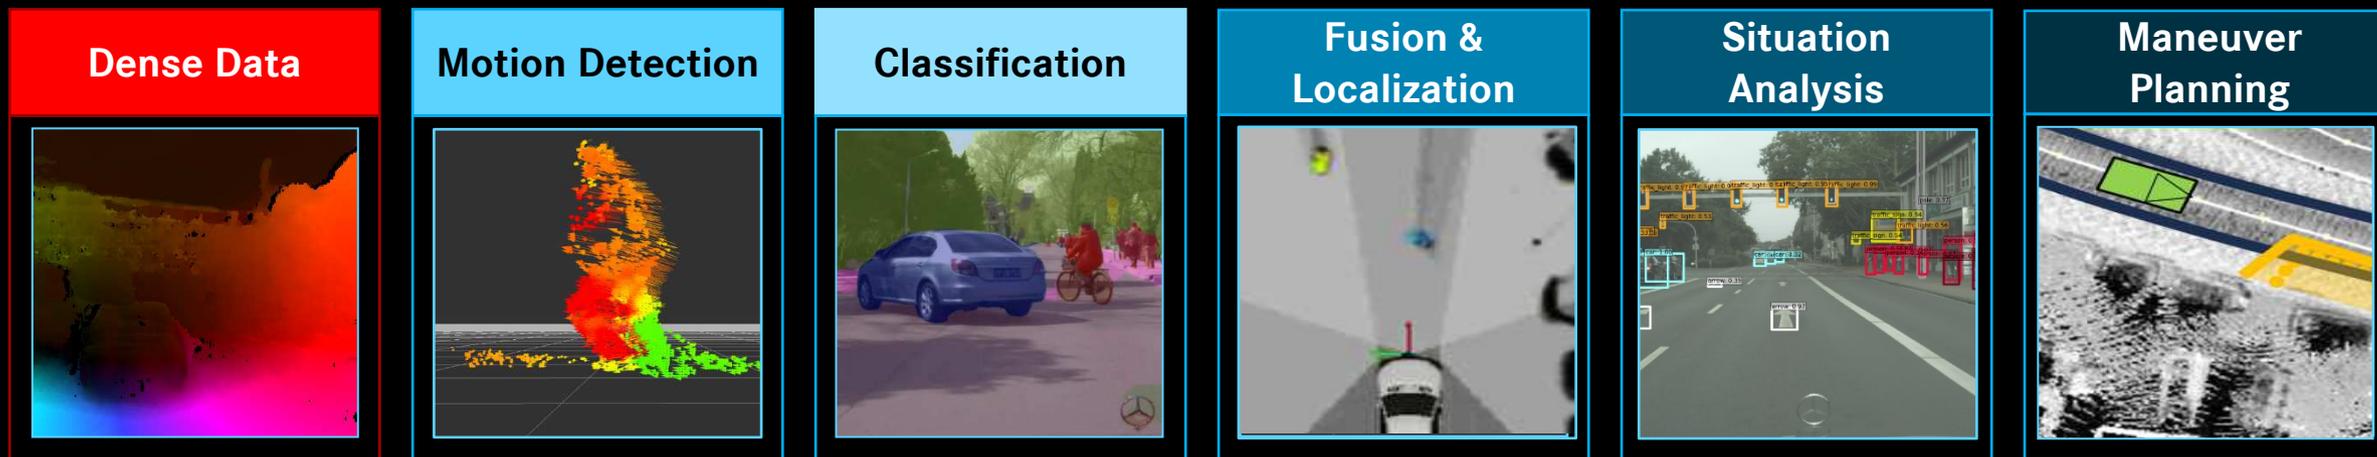

Anything a driver would do needs to be controlled electronically

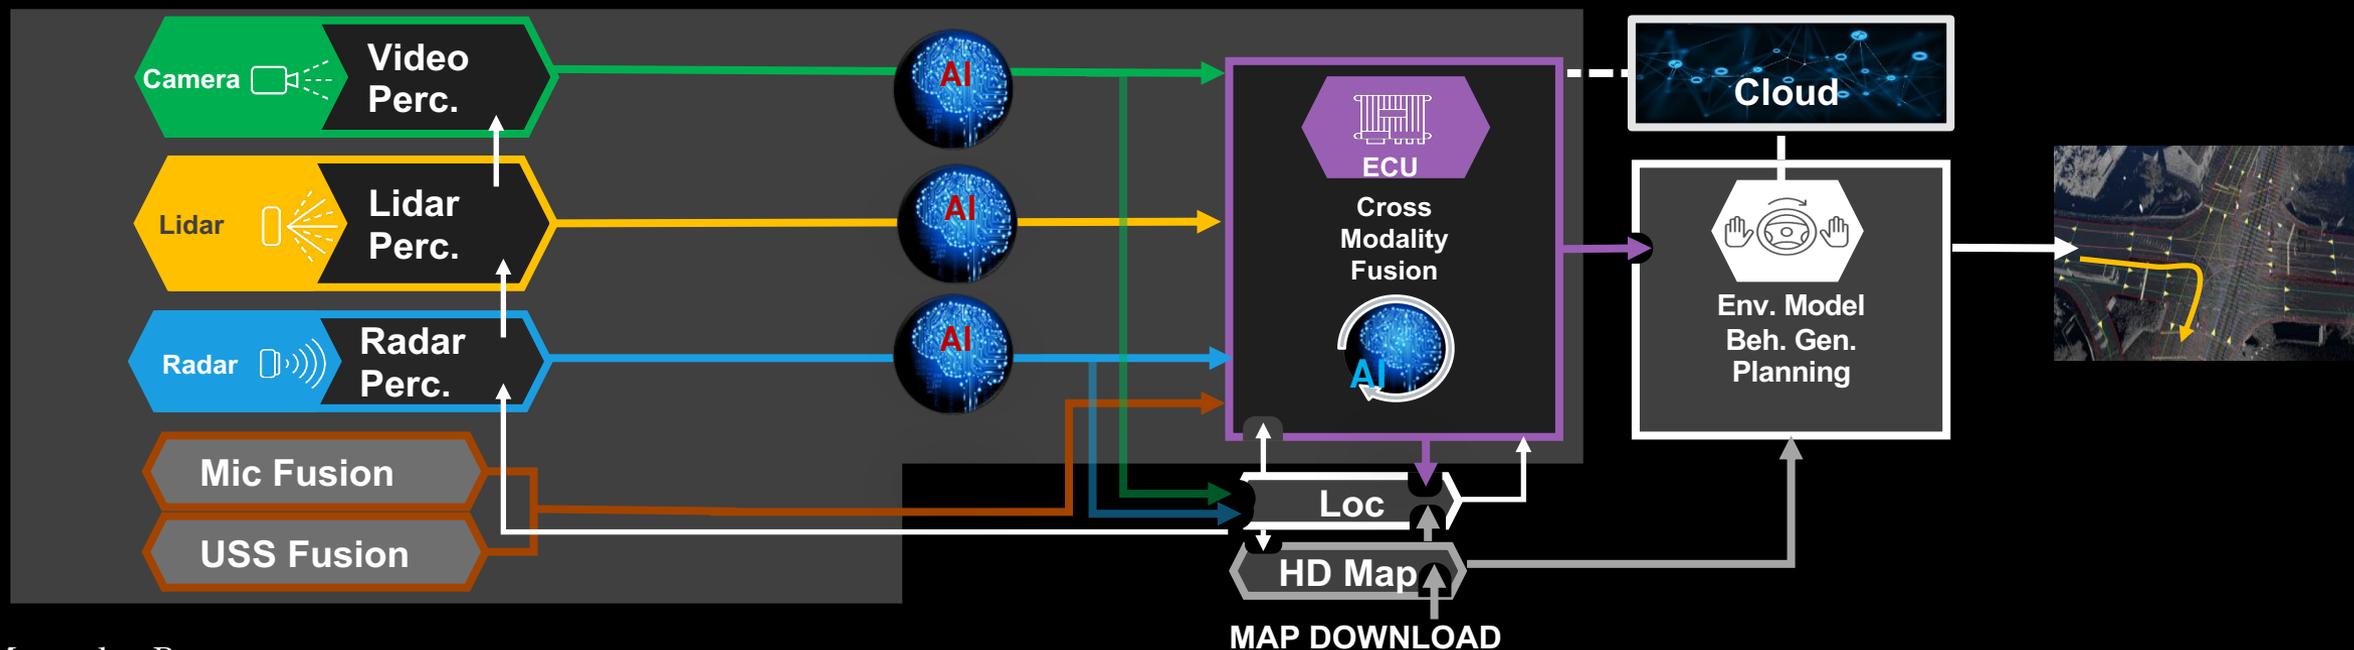

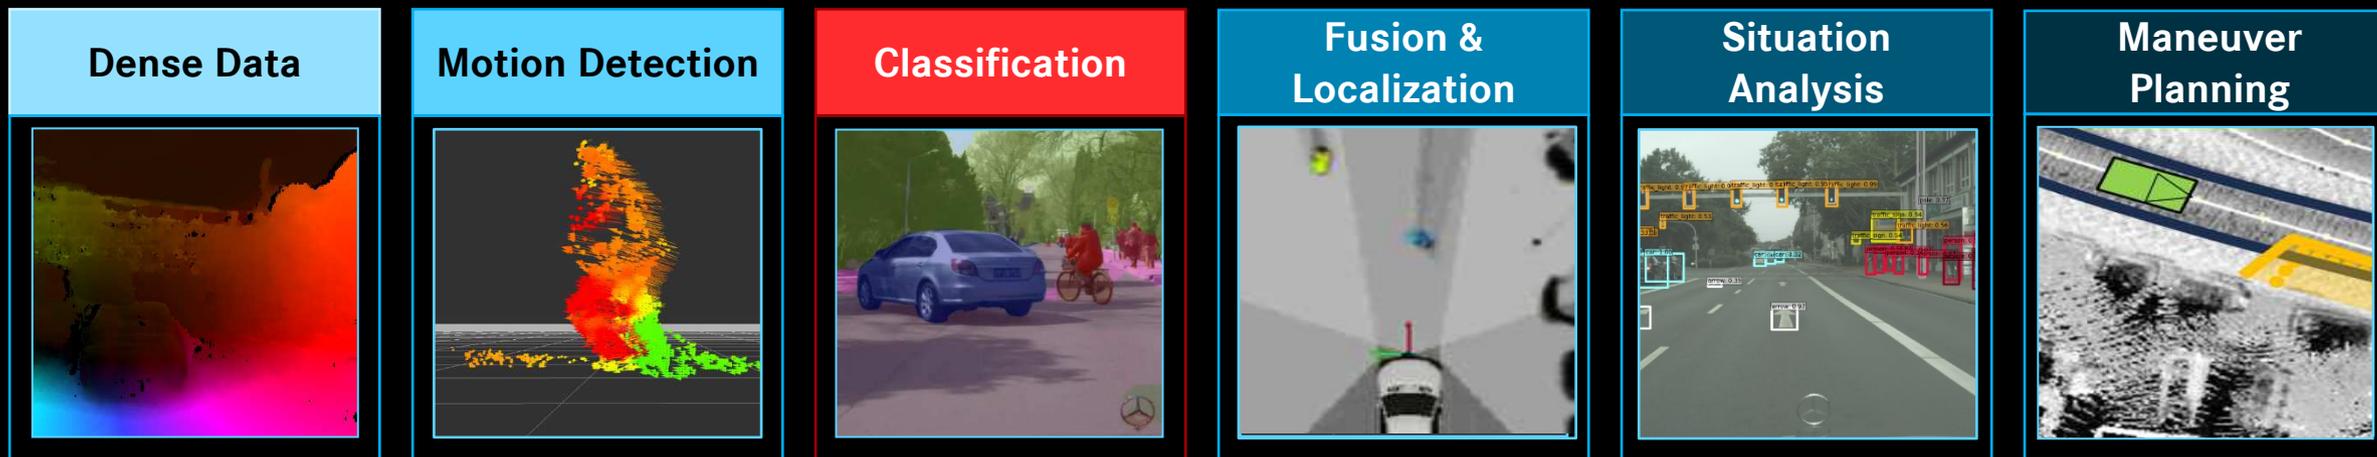

Artificial Intelligence (AI) is Key to understand Sensor Data

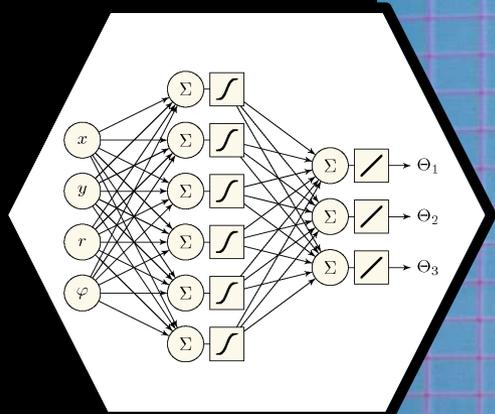

Artificial Intelligence (AI) is Key to understand Sensor Data

Artificial Intelligence (AI) is Key to understand Sensor Data

Shallow Neural Networks 1989

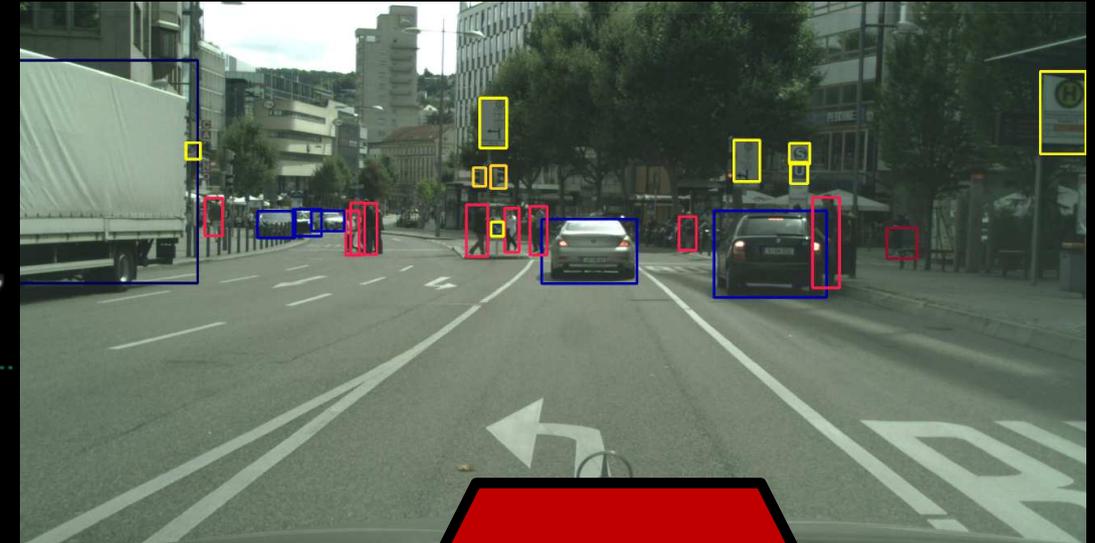

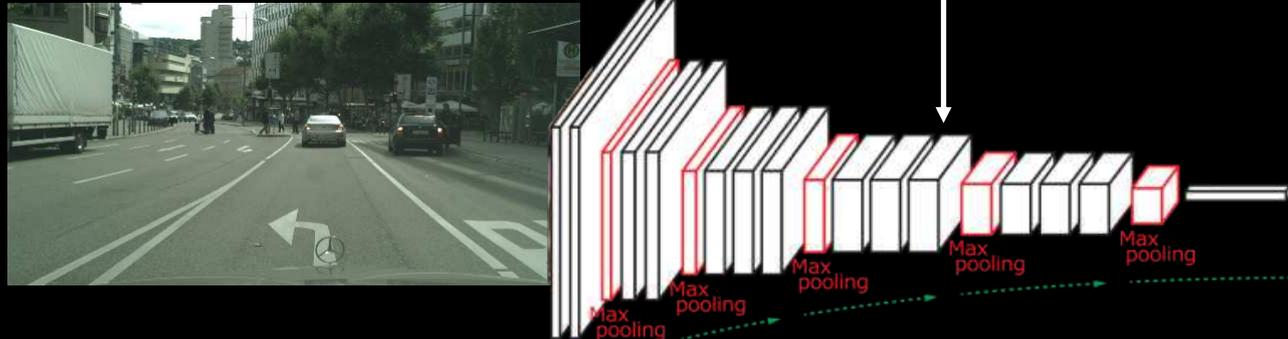

22 neurons
4.000 weights
1.000 images

Deep Neural Networks 2018

each **layer** computes one of a few simple mathematical operations that can be *highly parallelized* (GPUs)

low-level features
first layers typically learn simple **edge-detection** and color filters

mid-level features
typically detect **simple shapes** like corners, circles, patterns, ...

high-level features
complex shapes, parts of larger objects (wheels), ...

24 Mio neurons
128 Mio weights
1 Mio images

Feeding the Brain More Data

Cityscapes Dataset

50 major German Cities

5000 precisely labeled frames

Using the Brain Instance Detection

Joint Instance Detection and Orientation Estimation

Intent Recognition Pedestrian Torso & Head Orientation

CNNs for Instance Detection and Orientation Regression

Head and torso estimation takes into account physical constraints.

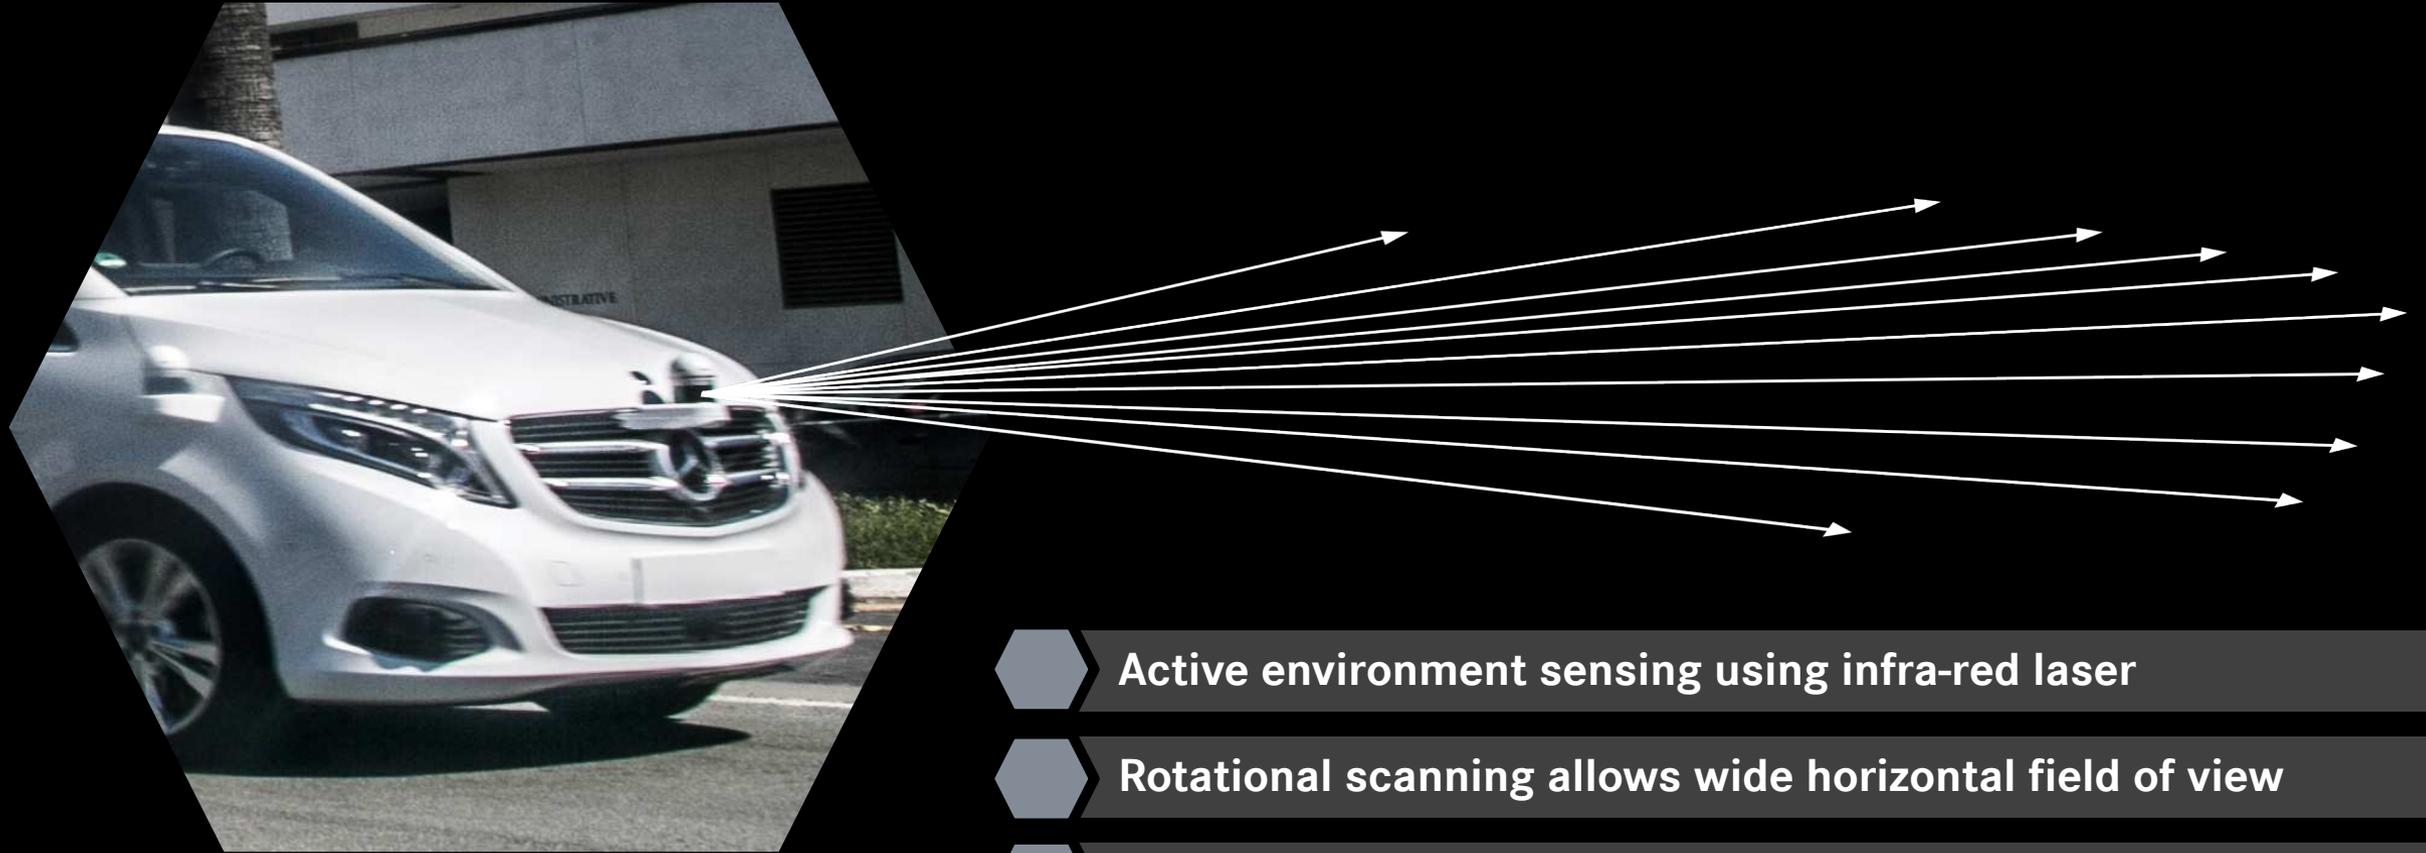

For clarity, results are only shown for one pedestrian at a time.

Robust head and torso estimation used as context information

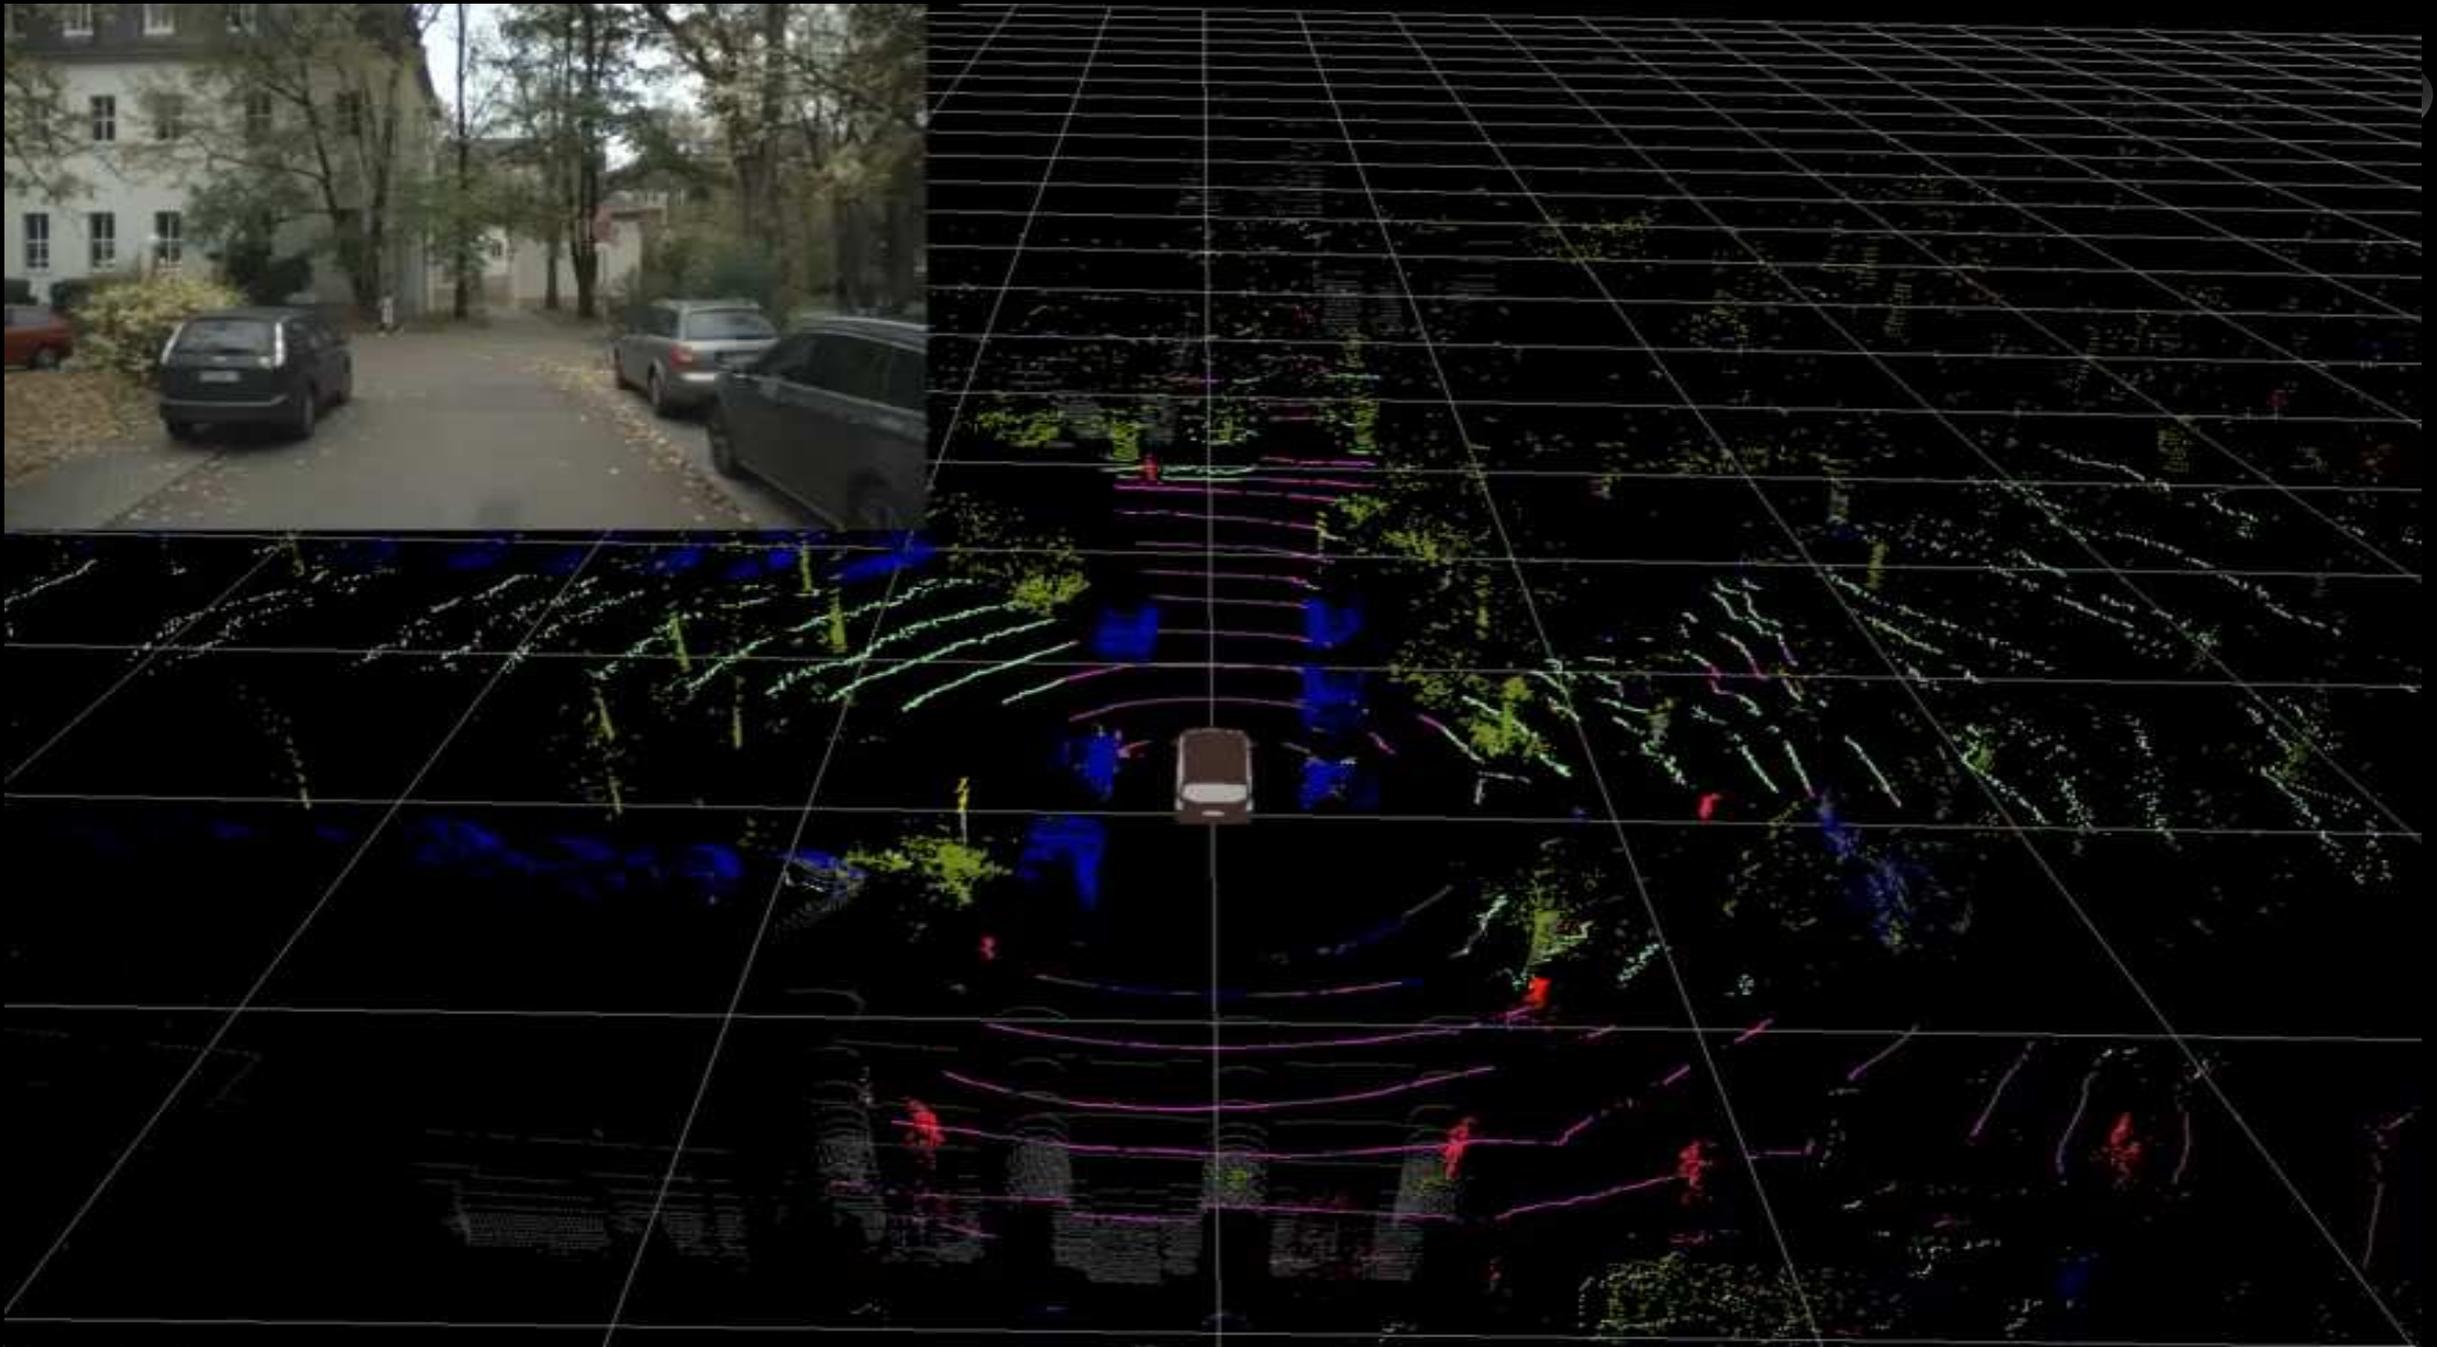

F. Flohr, M. Dumitru-Guzu, J. F. P. Kooij and D. M. Gavrila. A probabilistic framework for joint pedestrian head and body orientation, *T-ITS*, 2015.

Sensors Lidar Principles

Accurate Object Measurements with Infra-red Lasers

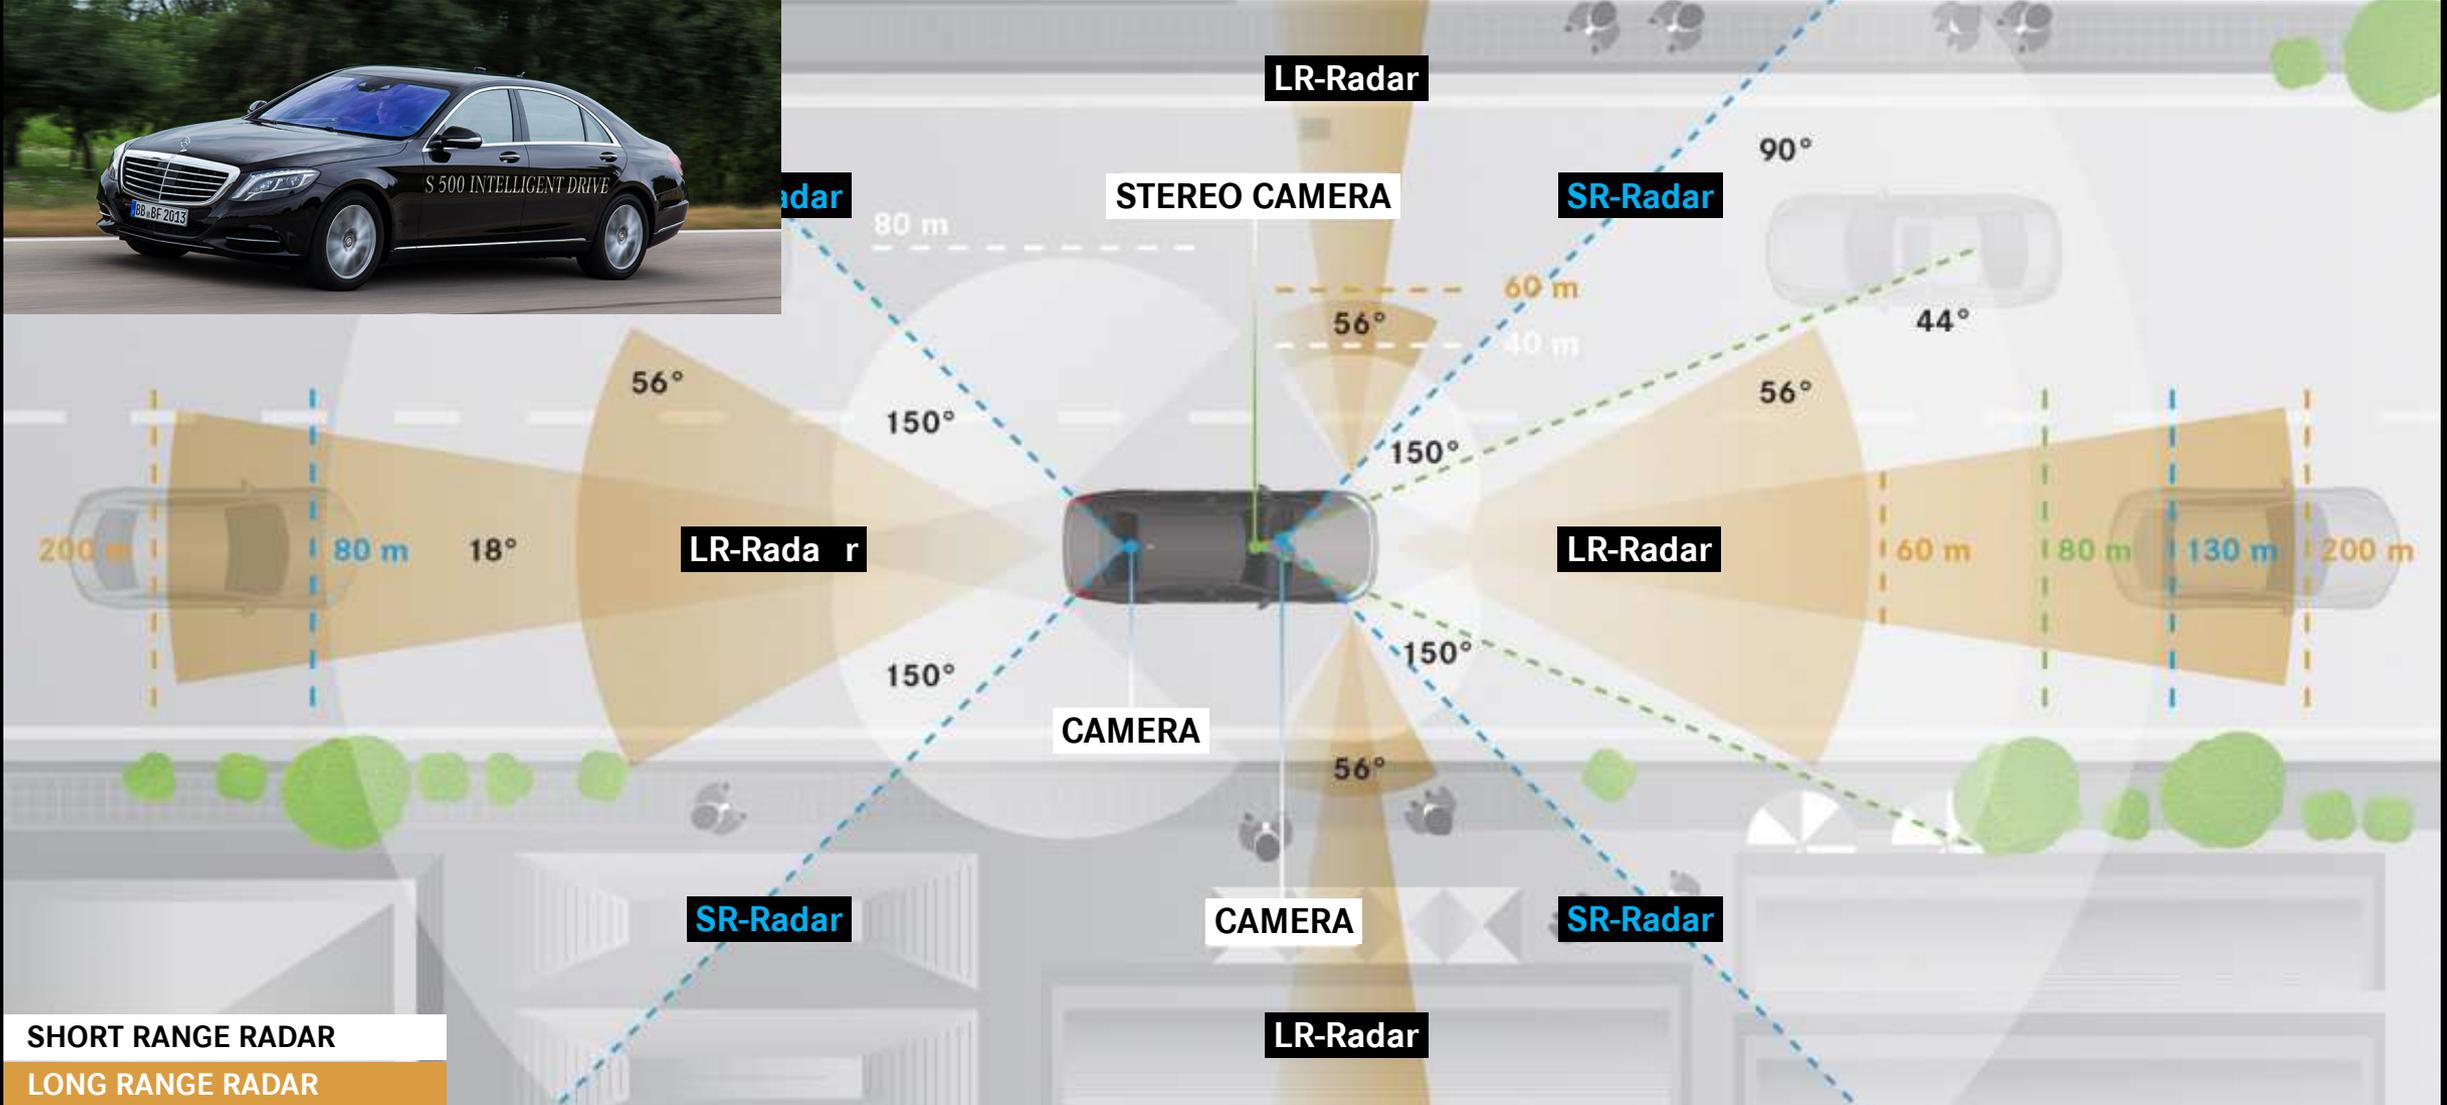

- Active environment sensing using infra-red laser
- Rotational scanning allows wide horizontal field of view
- Real 3D and intensity measurements via time-of-flight
- Up to 1.3 Mio. 3D points per second in up to 128 layers

Sensors Radar

Artificial Intelligence (AI) is Key to understand Sensor Data

Fusion of Sensor Results

The Important Step Between Perception and Planning

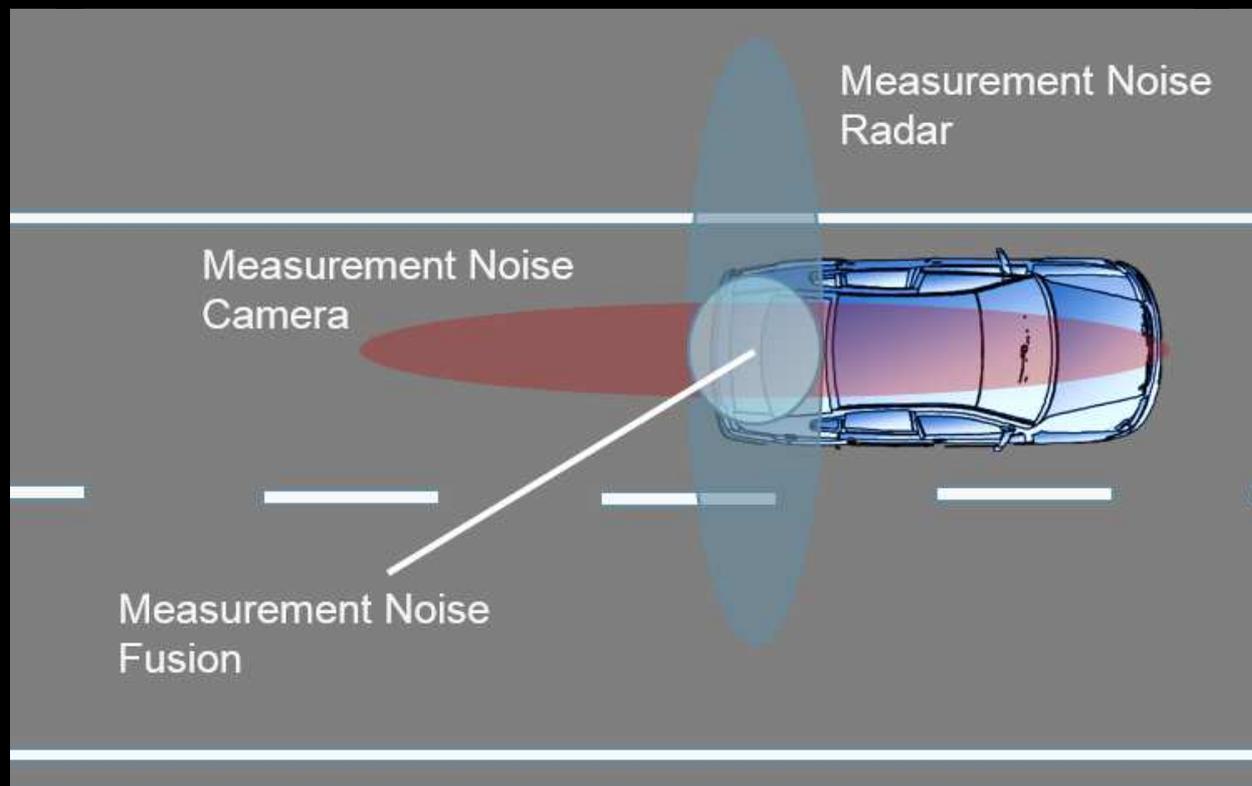

Fusion of Sensor Results

Fusion Tasks

IMPROVE ACCURACY

REDUNDANCY

Combine information from different sensors to generate an accurate and robust representation of the environment

Fusion of Sensor Results

Fusion Tasks

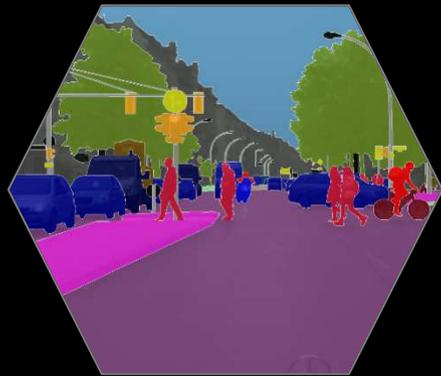

FUSION PROVIDES:

basis for planning the car's behavior

an accurate and detailed picture of the environment on a more aggregated level, i.e. the consolidated sight of the car

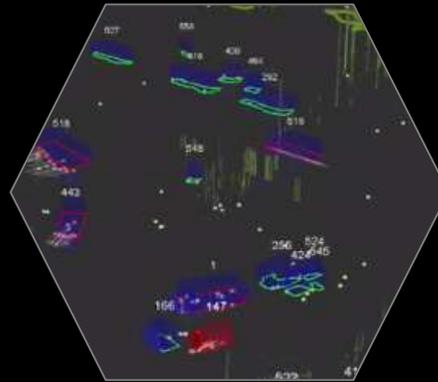

NO LONGER ABSTRACT FEATURES FROM SINGLE SENSORS BUT:

Classified object

Movement over time

Contours of obstacles

Road infrastructure

Visible space

Fusion of Sensor Results

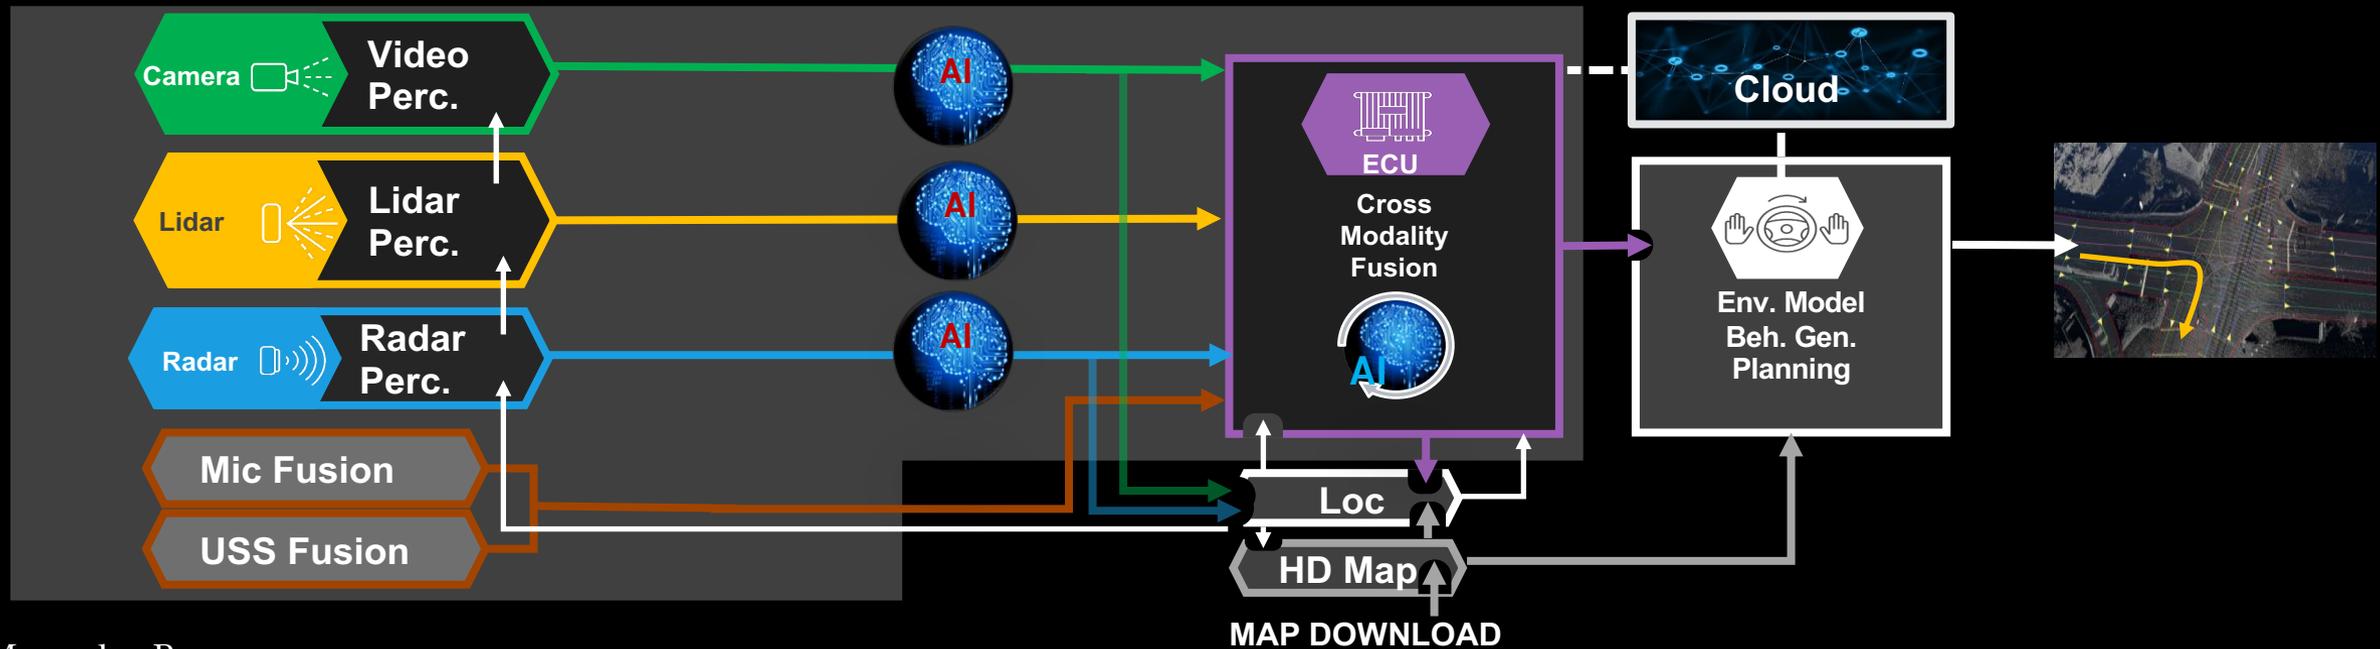

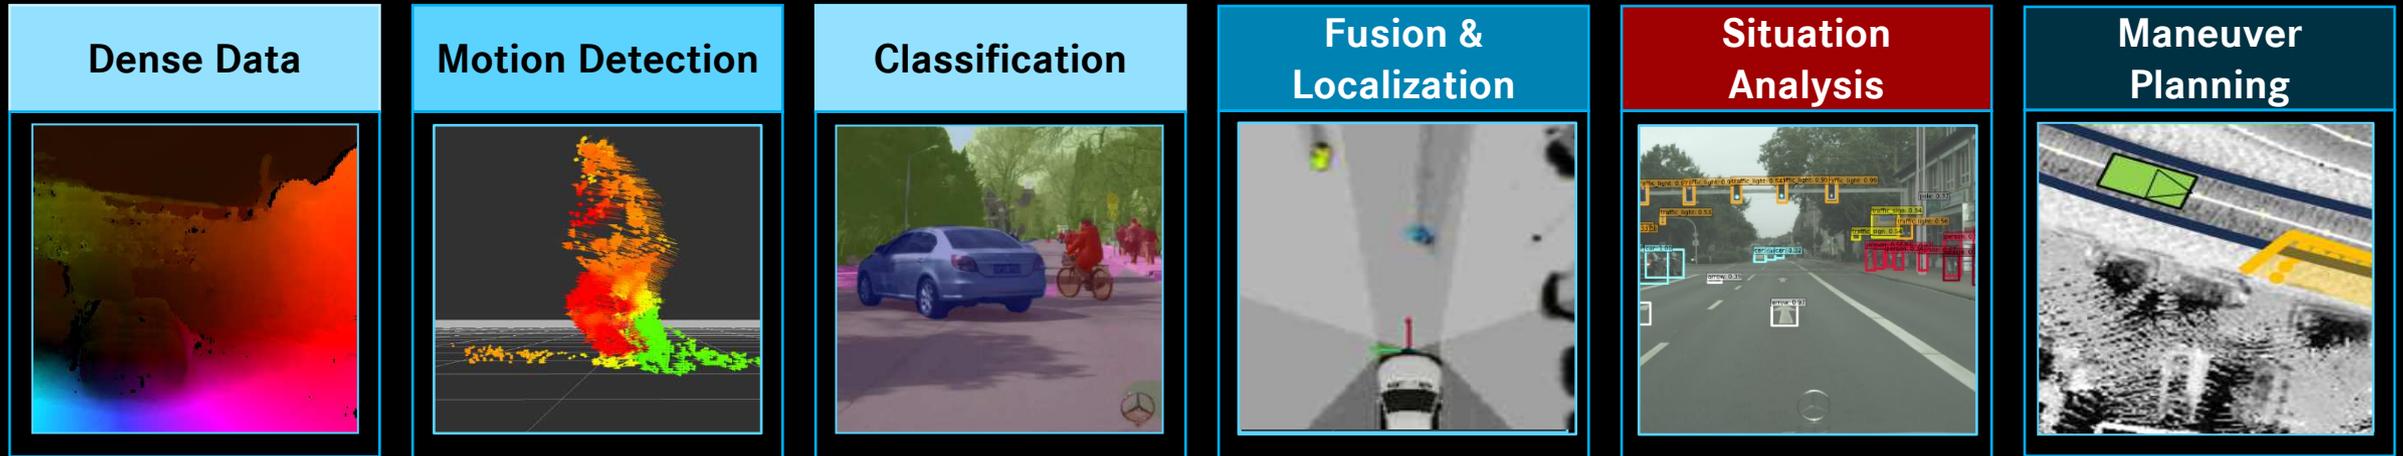

Fusion Tasks

Through the eyes of a car 

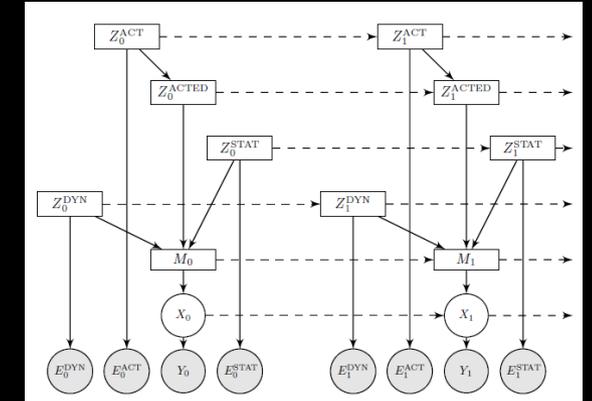

Artificial Intelligence (AI) is Key to understand Sensor Data

Vulnerable Road User Understanding

Dynamic Bayesian Networks with Context Cues

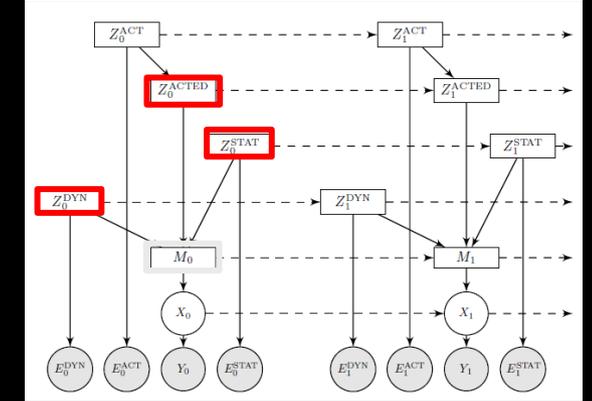

A human driver relies heavily on context cues to anticipate how a traffic situation will evolve.

Various context cues influence the pedestrian motion

J. P. F. Kooij, N. Schneider, F. Flohr and D. M. Gavrila. Context-based pedestrian path prediction. *ECCV*, 2014.

Vulnerable Road User Understanding

Dynamic Bayesian Networks with Context Cues

At intersection?
 On collision course?
 Hand gesture?

J.F.P. Kooij, F. Flohr, E.A.I. Pool and D.M. Gavrila. "Context-based Path Prediction for Targets with Switching Dynamics", IJCV 2018

A futuristic city street scene. In the foreground, a sleek, silver concept car is parked on a road with glowing blue and green patterns. A person in a dark jacket and light pants is walking away from the camera on the left. The background features modern, multi-story buildings, some with green roofs, and a clear blue sky. A large white number '3' is overlaid on the left side of the image.

3

Challenges

Bad Weather
Darkness
Limited Range

Neural Networks

Test your own **perception capabilities** vs. a Neural Network

Check the image for three (3!) seconds and then have a look at the result of the Neural Network, which had only a mere 30 milliseconds glance at it. Ready to start?

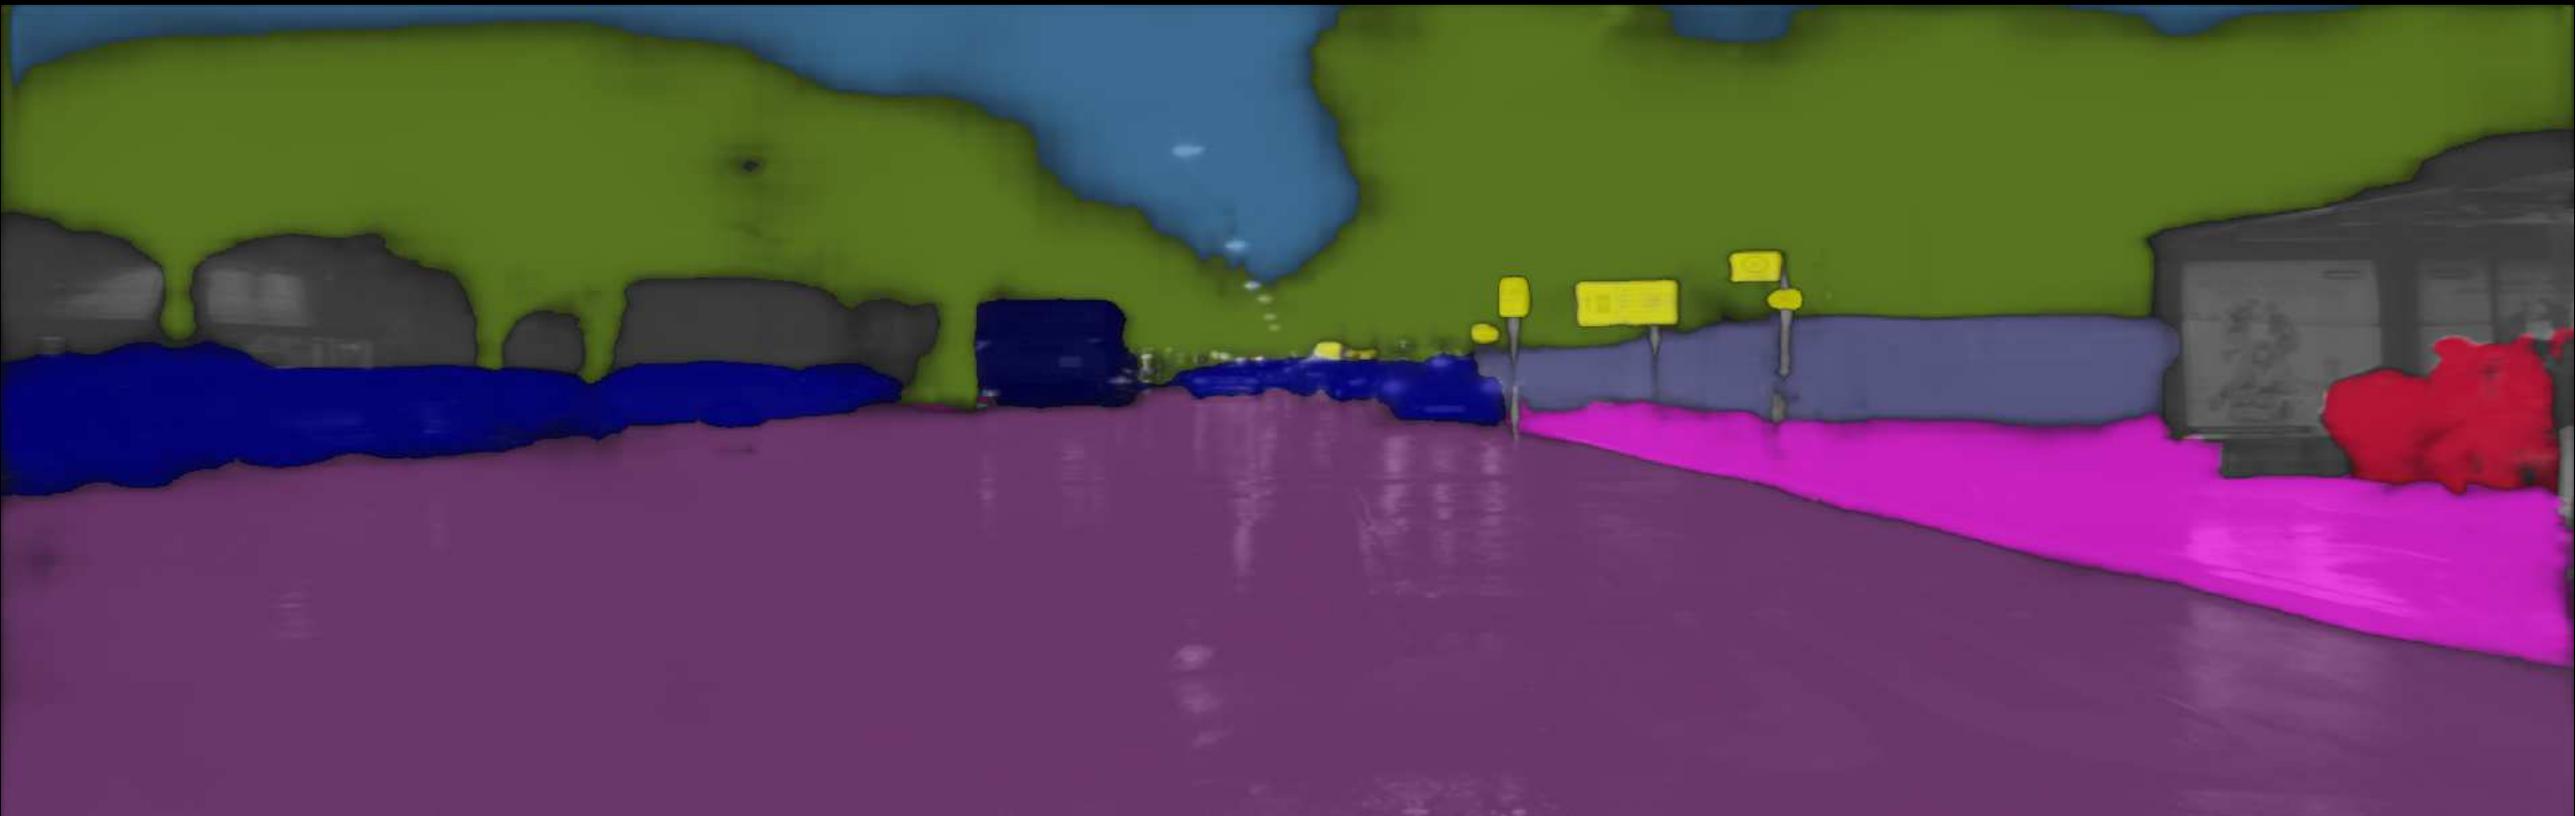

Not sure whether some “New Players” would have detected the crossing truck ...

Neural Networks CNNs perform only well,
if training data and training parameters are chosen carefully

Example: Night performance of CNN: if trained with day data...

... and if trained with proper night data

Where Are We in the Hype Cycle?

GARTNER HYPE CYCLE

*“We’re going to end up with complete autonomy, and we will have [it] in approximately **2 years.**”*

- Elon Musk, Tesla (December 2015)

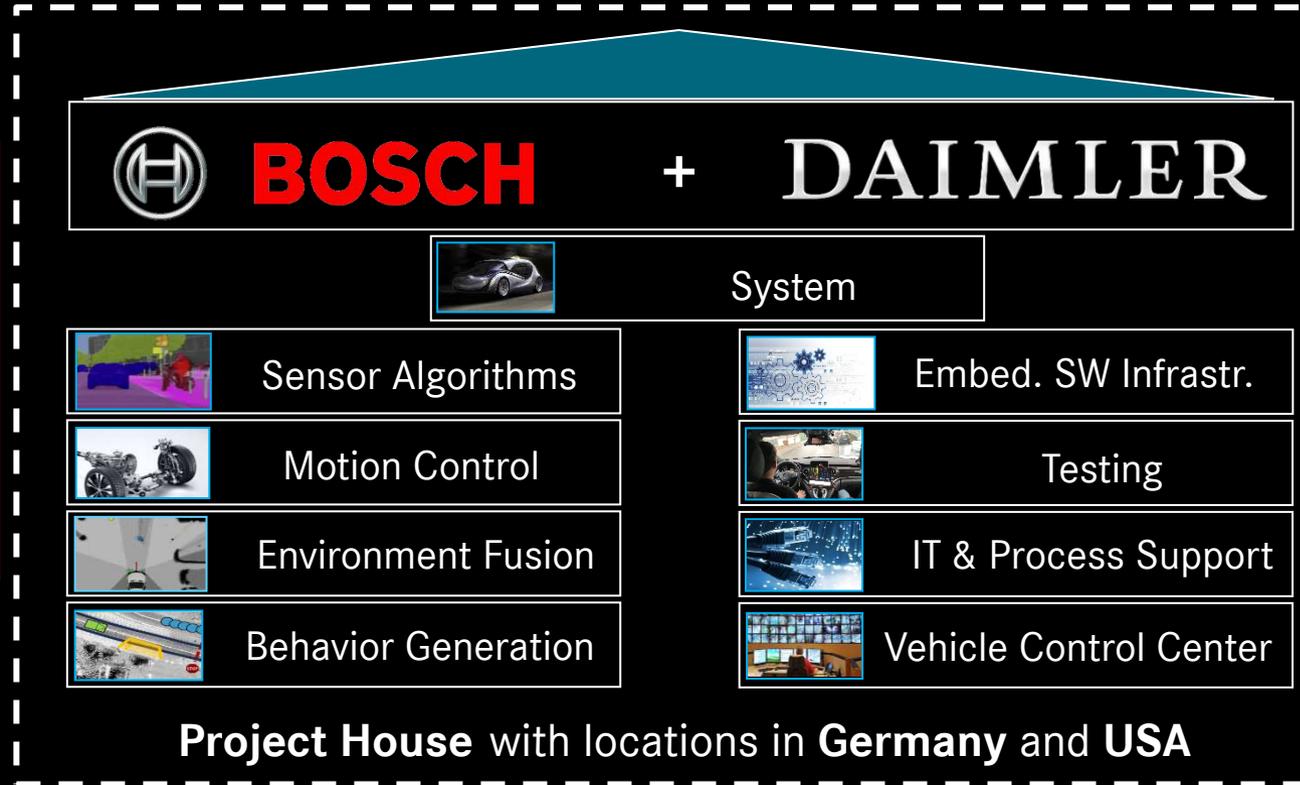

*“Maybe it’s **3 years**, maybe it’s **30 years**. I am here to tell you that honestly, it’s a bit of both.”*

- Chris Urmson, Google (March 2016)

Daimler joined forces with Bosch in common Project House to combine strengths of OEM and Tier1

- Hardware (Sensors, Actors, ECUs)
- Software for HW components

- Vehicles
- Integration of systems in vehicle line

- **Common Development of AD-Kit to be used in Robo Cars**
- **Artificial Intelligence enabler for Autonomous Driving (Nvidia)**
- **Functionally SAVE acc. to ISO26262**
